### Innovation and digitization of forming processes for Industry 4.0

The post-process data evaluation offers the possibility to analyze and evaluate the entire process data for the first time. Important conclusions can be found about process variation, setting of monitoring limits and recognition of process influences during the whole production run. The knowledge acquired is helpful in determining the optimum process parameters and provides detailed conclusions about tool wear.

## ZEISS ScanBox Series 5: automated, modular, customer-driven

The new optical 3D measuring machine by ZEISS combines new high-end components and enhanced user convenience.

### Benefits:

- Three new model variants for efficient quality control in the production process
- Modular concept allows for flexible adaptation to the user's needs
- Ergonomic design with height-adjustable control panel
- High throughput thanks to automation: controlling measurements with ZEISS Inspect Pro and VMR
